Stat 134: Section 18

Adam Lucas

Nov 10th, 2021

Conceptual Review

- a. If (X,Y) has density f(x,y) in the plane, then what is the density of X+Y?
- b. What is the density of Y/X?

Problem 1

Let X = U + V, Y = UV for independent uniform (0,1) variables U and V. Find the density of X and Y.

Problem 2

Suppose $X, Y \sim Exp(\lambda)$, and X, Y are independent.

- (a) Find the density of Z = X/Y.
- (b) Find the density of $W = \frac{X}{X+Y}$
